

JPS INDUSTRIES, INC. THE FINEST BAFFLE CURTAINS IN THE WORLD.

JPS Industries, Inc. is devoted exclusively to the manufacturing and installation of baffle curtains, and we hold patents for many of our designs.

With more than 40 years experience in baffle curtains, JPS proudly serves the needs of the most demanding private and governmental clients in the pulp and paper, food processing, chemical, manufacturing and power generation industries, and many others.

Of the long list of JPS clients with ongoing needs, virtually 100% return year after year. This testament — plus our unprecedented, full two year warranty on all JPS Baffle Curtains — makes JPS the clear choice when effectiveness and cost efficiency are your primary concerns.

HERE'S WHY JPS BAFFLE CURTAINS ARE THE BEST IN THE WORLD.

When you order a JPS Baffle Curtain, it is custom-manufactured to fit your exact specifications. We consult with you before we sew a single silicon-treated nylon stitch. When your Baffle Curtain is delivered, we can install it if you wish. And we stand behind its effectiveness for a full two years, 100%, with optional plans extending to 5 years, 100%. JPS Baffle Curtains are so strong that some have been on the job continuously for more than 20 years — with regular inspections and only minor repairs.

SUCCESSFUL LONG-TERM INSTALLATIONS MAKE JPS THE CLEAR CHOICE.

Every structural component of JPS Baffle Curtains has the same rate of linear expansion, and it is this design feature that makes our Curtains work as well and as long as they do. No other manufacturer makes this claim, and its importance cannot be overestimated. It means that when JPS Baffle Curtains are exposed to the elements, they absorb shocks and normal changes in the environment evenly throughout the structure. Thus, there is less wear and tear on each part, joints stay together longer, moorings remain anchored, and the integrity — and effectiveness — of the whole product are ensured.

Every design step and manufacturing element bespeaks JPS' preoccupation with precision. For Baffle Curtin applications, JPS can take soundings of your pond or lagoon with the most modern sonar equipment. Only after plotting the exact contour of your basin bottom will we begin to fabricate the exact series of Baffle Curtins required to achieve the desired results.

JPS has the capabilities to generate 3 dimensional hydrodynamic models of waste water systems to optimize baffle and aerator locations.
